

the missing piece of CCTV

THE FOOTAGE WHISPERER

"SEE WHAT THE CAMERA SAW"

100+ TOPICS - AIRPORTS TO ZOOS

UTILITY VALUE OF
COM-SUR™ FOR
THE CHEMICAL AND
FERTILIZER INDUSTRY

WELCOME

AUDIT HOURS OF FOOTAGE IN MINUTES
FIND OUT HOW COM-SUR WILL HELP

CCTV surveillance is common in the chemical and fertilizer industry, but footage is often only reviewed reactively. Our company realized this problem early-on and has developed the world's only CCTV video footage auditing software that encourages daily auditing (hours in minutes) of CCTV footage, filling the gap for a complete "workflow". The software works with existing cameras and VMS, regardless of type/brand, and provides a standardized approach for intelligent incident reporting. Our software also offers exceptional investigative capabilities.

'COM-SUR' – THE WORLD'S ONLY CCTV VIDEO
FOOTAGE AUDITING, SMART BACKUP, AND
STANDARDIZED INTELLIGENT INCIDENT
REPORTING SOFTWARE – THE MISSING PIECE
OF CCTV

COM-SUR is the world's only CCTV video footage auditing, smart backup, and standardized intelligent incident reporting software that serves as a complete workflow and force multiplier. It helps audit 24 hours of footage in minutes, reduces data size, creates standardized intelligent reports, and delivers business intelligence. COM-SUR helps unlock hidden information in CCTV footage and enables people to gain actionable intelligence, improve homeland security, prevent crime and losses, identify and mitigate threats and hazards, and improve operational efficiency. It empowers people to gain new jobs as CCTV video footage auditors and start new businesses of auditing video footage. Like MS Office, COM-SUR is an enabler that makes it easy to work with CCTV cameras in a standardized way, leading to better decision-making. It also offers exceptional investigative capabilities.

HOW COM-SUR SMARTLY REDUCES 'VIDEO' STORAGE SIZE

COM-SUR employs an innovative approach to smartly reduce the amount of video to be audited and consequently the storage size of videos. Regardless of the video's frame rate, COM-SUR captures a single screenshot of the consolidated 'moment' of 'that' one second, when the I, P, and B frames come together. This method significantly reduces data size without sacrificing vital information. It goes without saying that when multiple cameras are displayed in a grid view, say 4x4, the storage size is further reduced since all the cameras are captured as a single image. Since no suggestion is being made to replace the actual video with screenshots, COM-SUR acts as a wonderful supportive technology both to audit (review) just 86400 frames representing 24 hours and reducing the data size at the same time.

CHEMICAL AND FERTILIZER INDUSTRY CHALLENGES

1. Theft and corporate espionage:

Chemical and fertilizer companies manage large amounts of confidential and sensitive data related to chemical trials, research and development, formulas, and patents. Safeguarding intellectual property and monitoring related processes is critical to prevent theft and corporate espionage.

2. Industrial accidents:

Chemical and fertilizer plants involve hazardous materials and processes that can lead to accidents such as explosions, fires, or toxic releases. These incidents can cause significant damage to the facilities, pose health risks to employees and nearby communities, and result in environmental contamination.

3. Terrorism:

Chemical and fertilizer plants may be attractive targets for terrorist organizations aiming to cause widespread destruction or harm. Attacks on such facilities can lead to catastrophic consequences, including loss of life, environmental pollution, and disruption of critical infrastructure. Perpetrators often conduct pre-operational surveillance of the target area, making it important to detect suspicious activity during this phase to prevent an incident.

4. Compliance issues:

Chemical and fertilizer companies face continuous scrutiny and inspections from regulatory bodies, requiring compliance with industry standards. Non-compliance can result in warnings, license cancellation/suspension, loss of brand reputation, product recall costs, legal costs for damage to health and life as well as regulatory fines.

5. Workplace safety:

The chemical and fertilizer industry involves working with hazardous materials and operating complex machinery. Ensuring the safety of employees is a constant challenge, requiring comprehensive safety protocols, training, and equipment to minimize the risk of accidents and occupational hazards.

6. Environmental impact:

Chemical and fertilizer plants have the potential to impact the environment through air emissions, water contamination, or soil pollution. Proper waste management, adherence to environmental regulations, and monitoring systems are essential to mitigate these risks and minimize the industry's ecological footprint.

7. Insider threats:

Chemical and fertilizer companies have to deal with insider threats from disgruntled employees or even unwitting staff who fail to follow proper security and safety measures.

8. Humongous growth of surveillance video:

The exponential growth of surveillance cameras has resulted in an unprecedented surge in surveillance video. Effectively managing this data has become a daunting challenge due to the massive storage capacity required, especially considering the prolonged retention periods necessary for security, incident investigation, or legal purposes.

Furthermore, the prevalence of high-resolution video with increasing megapixels compounds the storage demands, making efficient data management an urgent priority for organizations grappling with the immense volume of surveillance footage.

COVID-19 PANDEMIC

The pandemic disrupted supply chains and impacted R&D and manufacturing activities in the chemical and fertilizer industry. Guidelines were issued to prevent the spread of COVID-19, but outbreaks still occurred, resulting in temporary shutdowns of operations.

USE OF VIDEO SURVEILLANCE AT CHEMICAL AND FERTILIZER COMPANIES

Most chemical and fertilizer companies have video surveillance covering the following areas:

- Loading and unloading areas
- Manufacturing areas
- Cleanrooms

- Laboratories
- Packaging areas
- Certain administrative offices
- Storage areas including cold rooms
- Warehouses and distribution centres
- Other critical areas that house expensive equipment and material

Further, the concerned stakeholders at chemical and fertilizer companies generally need to review and analyse recorded CCTV video footage from time to time for investigating incidents and/or accidents, and other issues in order to corroborate evidence as well as assist police/law enforcement agencies. as well as to train employees to prevent future recurrences.

REMOTE VISUAL INSPECTION

Chemical and fertilizer companies make use of specialised CCTV systems to carry out 'remote visual inspection' of structures, equipment, and components that are otherwise inaccessible to a human inspector to physically carry out such activity due to reasons such as their physical configuration, safety concerns, or other limitations. Recently, drones are also being used for remote visual inspections.

VIDEO EXPOSURE MONITORING

Some chemical and fertilizer companies also make use of a technique known as video exposure monitoring (VEM) in order to evaluate the various 'exposures' to potentially hazardous substances like chemicals, dust, exhaust,

radioactive material, carcinogenic agents, gases, pesticides, fire etc., that their workers are subjected to in their premises.

LIVE MONITORING – CHALLENGES

Some chemical and fertilizer companies have a dedicated control room with operators, set up for live monitoring of CCTV cameras. However, live monitoring comes with its own set of challenges of video blindness, poor attention span, boredom, operator bias, false alerts, and so on.

Moreover, these cameras continuously capture and record humungous amounts of video data. It therefore becomes a daunting task for the operators to review and analyse this data whenever the need arises. Thus, it may be noted that benefits from video surveillance systems can accrue only when they are used optimally, suggestions for which are enumerated further on, in this document.

COMPLIANCE - GENERAL

Conformity or compliance in any organization means adherence to laws and/or rules and regulations, various standards, as well as data storage and security requirements as laid down by government bodies, governing bodies of the respective industry, or the management of the organization. When an organization complies with the requirements mandated by government and/or governing bodies, then it is termed as 'regulatory compliance' which enables the organization to run in a legal and safe manner.

COMPLIANCE - AUDITS

Several organizations carry out compliance

audits on a regular basis to avoid the potential consequences of non-compliance.

A compliance audit examines how well an organization adheres to compliance requirements. Some organizations use video surveillance to monitor compliance issues and audit recorded CCTV video footage from time to time for investigating and preventing compliance issues. Auditing CCTV provides actionable insights on the level of compliance within the organization.

AUTOMATED SOFTWARE – WHY THEY WILL NOT WORK IN ISOLATION

In the wake of the Christchurch shooting incident, several high-profile places of worship considered deploying gun detection technology. However, there are concerns about its efficacy, since it may not be able to detect all types of weapons, or the perpetrator could still create damage before being detected.

Similarly, automated systems like video analytics, AI/ML can only detect what they have been programmed for. What about the rest? Again, these technologies are prone to triggering huge amounts of false alarms. Also, since the permutation combinations of exceptions can be vast and varied, it becomes almost impossible to automate every kind of exception. Facial recognition technology also raises ethical and privacy concerns, and has been found to produce inaccurate results, especially for certain ethnic groups. Therefore, experts suggest that while automated technologies will continue to grow, human intervention and intelligence will still be necessary to verify alerts and ensure their efficacy.

“CCTV IS NOT ENOUGH – WE MAKE IT WORK FOR YOU”

While it is not being suggested that optimal usage of video surveillance can cure all issues, several issues of the following kind can be addressed by doing just a little 'more' with respect to making the optimal use of video surveillance systems:

- Compliance issues
- Recces/suspicious movements /activities
- Insider job/security lapses
- Unauthorized/unlawful activities/visitors
- Accidents/Causes of potential accidents
- Health and safety issues
- Housekeeping issues
- Fraud/loss/corruption/theft
- Unclaimed/unattended objects
- Human rights violations
- Staff negligence
- Unruly staff
- Inattentive staff (e.g. guard sleeping)
- Issues with female staff
- Camera/recorder malfunctions

So, what is the 'more' that needs to be done?

1) AUDIT CCTV VIDEO FOOTAGE DAILY AS A STANDARD OPERATING PROCEDURE

'Auditing' means 'seeing' what the cameras 'saw'. Auditing of CCTV footage should be done daily (continuous investigation) to identify potential issues and threats. Auditing is a dedicated and systematic process that helps address challenges related to live monitoring and alert-based systems. Auditing helps in evaluating analyzing incidents to improve existing policies, procedures, and processes. Concerned personnel should be trained to become CCTV video footage auditors, and the audit teams should be rotated to avoid complacency/collusion. Daily auditing of CCTV footage can also help in adhering to the principles of Kaizen and TQM for business improvement.

2) DOCUMENT AUDIT FINDINGS/INCIDENTS

Audit findings/incidents should be documented in a standardized template to find the root cause to prevent future recurrences. Historical data of such findings/incidents can reveal patterns that can help take better informed corrective and preventive action. If the entire industry reports incidents in a standardized template, relevant authorities can derive business intelligence from the data and take action for the collective benefit of the chemical and fertilizer industry.

3) ENSURE DISASTER RECOVERY OF CCTV VIDEO FOOTAGE – LIKE A 'BLACKBOX'.

CCTV video footage must be stored at multiple locations in order to ensure that even if the recorder is stolen, destroyed or tampered with the data is never lost. Further, any backed-up

data must easily be searchable and retrievable; else, it is going to be a nightmare finding the relevant video.

4) DISPLAY DYNAMIC INFORMATION AT RELEVANT PLACES

Document and display details of information that is dynamic in nature in relevant areas.

For example:

1. List of officials on duty (who can be contacted in case of any emergency/grievance).
2. List of authorized security personnel deployed at the chemical or fertilizer company.
3. List of habitual offenders/suspects likely to visit the chemical or fertilizer company's premises (a 'Watch out' list).

5) USE A POWERFUL NEW SIGNAGE

"WE AUDIT CCTV VIDEO FOOTAGE EVERYDAY".

One size, one color, one powerful message.
Across the nation.

DE-CENTRALIZED SURVEILLANCE +
CENTRALIZED SURVEILLANCE = OPTIMAL
RESULTS

Organizations with multiple locations struggle with centralized video surveillance due to infrastructure cost, internet bandwidth, and operator limitations. De-centralized surveillance offers higher accountability at each location and better situational awareness, leading to more chances of discovering exceptions.

CONCLUSION

"You see, but you do not observe" is a quote by Sherlock Holmes in A Scandal in Bohemia (1891, written by Sir Arthur Conan Doyle).
COM-SUR makes 'observation' far effortless and effectual leading to superior results.

"Cameras don't lie" - but how will you know unless you 'see' what the cameras 'saw'?
Audit CCTV - why suffer!

Get award-winning COM-SUR now. Don't wait for things to go wrong!
